**PHYSICS**

**9702/35**

Paper 3 Advanced Practical Skills 1

**May/June 2016**

**CONFIDENTIAL INSTRUCTIONS**

**Great care should be taken to ensure that any confidential information given does not reach the candidates either directly or indirectly.**

**No access to the Question Paper is permitted in advance of the examination.**

---

If you have any problems or queries regarding these Instructions, please contact CIE  
by e-mail: [info@cie.org.uk](mailto:info@cie.org.uk),  
by phone: +44 1223 553554,  
by fax: +44 1223 553558,  
stating the Centre number, the nature of the query and the syllabus number quoted above.

---

This document consists of **8** printed pages.

## Preparing apparatus

These Instructions detail the apparatus required for the experiments in the Question Paper. It is essential that absolute confidentiality is maintained in advance of the examination: the contents of these Instructions must not be revealed either directly or indirectly to candidates.

No access is permitted to the Question Paper in advance of the examination.

If you have problems or queries regarding these Instructions, please contact CIE:

by e-mail: info@cie.org.uk,  
or by telephone: +44 1223 553554,  
or by fax: +44 1223 553558,

stating the nature of the query and quoting the syllabus and paper numbers (9702/35).

It is assumed that the ordinary apparatus of a Physics laboratory will be available.

## Number of sets of apparatus

The number of sets of apparatus provided for each experiment should be  $\frac{1}{2}N$ , where  $N$  is the number of candidates taking the examination. There should, in addition, be a few spare sets of apparatus available in case problems arise during the examination.

## Organisation of the examination

Candidates should be allowed access to the apparatus for each experiment for one hour only. After spending one hour on one experiment, candidates should change over to the other experiment. The order in which a candidate attempts the two experiments is immaterial.

## Assistance to Candidates

Candidates should be informed that, if they find themselves in real difficulty, they may ask the Supervisor for practical assistance, but that the extent of this assistance will be reported to the Examiner, who may make a deduction of marks.

Assistance should only be given:

when it is asked for by a candidate,  
or as directed in the Notes sections of these Instructions,  
or where apparatus is seen to have developed a fault.

Assistance should be restricted to enabling candidates to make observations and measurements. Observations and measurements must not be made for candidates, and no help should be given with data analysis or evaluation.

All assistance given to candidates must be reported on the Supervisor's Report Form.

## Faulty apparatus

In cases of faulty apparatus (not arising from a candidate's mishandling) that prevent the required measurements being taken, the Supervisor may allow extra time to give the candidate a fair opportunity to perform the experiment as if the fault had not been present. The candidate should use a spare copy of the Question Paper when the fault has been rectified or when working with a second set of apparatus.

## Supervisor's Report

The Supervisor should complete the Supervisor's Report Form on pages 7 and 8 and enclose it in the envelope containing the answers of the candidates. If more than one envelope is used, a copy of the report must be enclosed in each envelope.

**Question 1****Apparatus requirements (per set of apparatus unless otherwise specified)**

Low voltage power supply fixed at 1.5V or 2V d.c. or 1.5V dry cell with terminals.

Card giving the value of the e.m.f.  $E$  of the power supply to the nearest 0.01V as shown in Fig. 1.1.

**Fig. 1.1**

Digital ammeter set to the range 0 – 200mA reading to the nearest 0.1 mA. If a digital multimeter is used, the range should be fixed and any unused terminals should be covered.

10 $\Omega$  resistor in a component holder. See Note 1.

Metre rule with a millimetre scale.

130cm of 36 swg bare constantan wire. See Note 2.

Wooden strip of approximate length 85cm and approximate cross-section 20mm  $\times$  5mm. See Note 2.

Wooden strip of approximate length 45cm and approximate cross-section 20mm  $\times$  5mm. See Note 2.

Four nails of approximate diameter 1.5mm and approximate length 20mm. See Note 2.

Four crocodile clips.

Six connecting leads.

Switch.

## Notes

- 1 The resistor should have a minimum power rating of 0.25W and a tolerance of 5% (e.g. RS Components product code 385-932). Tape should be used to hide the value of its resistance.
- 2 The nails, wire and wooden strips should be assembled as shown in Fig. 1.2. The nails should be hammered into the wooden strips. The wires should be soldered to the nails. It should be possible to attach crocodile clips to each of the four nails.

**Fig. 1.2**

- 3 The apparatus should be laid out on the bench. If the apparatus is to be used by another candidate, then it should be restored to its original state.

## Information required by Examiners

Sample set of numerical results, clearly labelled "Supervisor's Results" and obtained out of sight of the candidates by the Supervisor, who should be a teacher of Physics or other competent physicist.

**Question 2****Apparatus requirements (per set of apparatus unless otherwise specified)**

Two stands.

Nail with approximate diameter 2.5 mm and approximate length 6.5 cm.

Two bosses. It should be possible to hold the nail securely in one of the bosses.

Free-running pulley. See Note 1.

Wooden strip with approximate dimensions 75 cm  $\times$  2 cm  $\times$  1 cm. See Note 2.

Mass hanger. See Note 3.

Modelling clay (e.g. Plasticine). See Note 3.

String. See Note 4.

Stopwatch reading to 0.1 s or better.

Metre rule with a millimetre scale.

180° protractor with 1° divisions.

Small triangular prism of approximate height 2 cm to act as a pivot.

**Notes**

- 1 It should be possible to attach the pulley to one of the stands using one of the bosses. A pulley with the approximate dimensions shown in Fig. 2.1 is suitable.

**Fig. 2.1**

- 2 Drill three holes in the wooden strip as shown in Fig. 2.2. It should be possible for the strip to swing freely when supported from the nail through each of the holes.

**Fig. 2.2** (not to scale)

Two of the holes should be labelled A and B as shown in Fig. 2.2.

- 3 Sufficient modelling clay should be attached to the mass hanger to give a combined mass that is equal to the mass of the wooden strip. If necessary, a combination of slotted masses and modelling clay may be used.
- 4 Attach string to the wooden strip as shown in Fig. 2.3.

**Fig. 2.3** (not to scale)

The loop should be big enough to accommodate the hook of the mass hanger.

- 5 The apparatus should be laid out on the bench. If the apparatus is to be used by another candidate, then it should be restored to its original state.

### Information required by Examiners

Sample set of numerical results, clearly labelled “Supervisor’s Results” and obtained out of sight of the candidates by the Supervisor, who should be a teacher of Physics or other competent physicist.

Permission to reproduce items where third-party owned material protected by copyright is included has been sought and cleared where possible. Every reasonable effort has been made by the publisher (UCLES) to trace copyright holders, but if any items requiring clearance have unwittingly been included, the publisher will be pleased to make amends at the earliest possible opportunity.

To avoid the issue of disclosure of answer-related information to candidates, all copyright acknowledgements are reproduced online in the Cambridge International Examinations Copyright Acknowledgements Booklet. This is produced for each series of examinations and is freely available to download at [www.cie.org.uk](http://www.cie.org.uk) after the live examination series.

Cambridge International Examinations is part of the Cambridge Assessment Group. Cambridge Assessment is the brand name of University of Cambridge Local Examinations Syndicate (UCLES), which is itself a department of the University of Cambridge.

**This form should be completed and sent to the Examiner with the scripts.**

### **SUPERVISOR'S REPORT FORM**

The Supervisor's Report should give full details of:

- (a) any help given to a candidate (including the nature of the help given and the name and candidate number of the candidate);
- (b) any cases of faulty apparatus (including the nature of the problem, the action taken to rectify it, any additional time allowed, and the name and candidate number of the candidate);
- (c) any accidents that occurred during the examination;
- (d) any other difficulties experienced by candidates, or any other information that is likely to assist the Examiner, especially if this information cannot be discovered in the scripts.

Cases of individual hardship, such as illness, bereavement or disability, should be reported direct to CIE on the normal Special Consideration form.

#### **Information required by Examiners**

For each question, please enclose a sample set of numerical results, obtained out of sight of the candidates and clearly labelled "Supervisor's Results".

#### **Supervisor's Report**

**Supervisor's Report (continued)**

**Declaration**

(to be signed by the Supervisor)

The preparation of this practical examination has been carried out so as to maintain fully the security of the examination.
